

Hack Warz®

As more information is stored and exchanged online, it is increasingly tempting for predators to break through security settings in order to gain access to private information. Life Cycle Engineering hosts security competitions, called Hack Warz, aimed at enhancing the skills of tech-savvy individuals. These competitions provide a fun arena for security experts to sharpen their skills to protect against hackers' assaults by becoming hackers themselves.

How a Hack Warz Event is Structured

Hack Warz is a Capture-the-Flag event to stretch your security muscle and have FUN! You will have several systems to compromise and gain valuable tokens (flags) for points. Tokens are valued by difficulty and skillset required. To close the event, there is a lessons-learned session in which participants demonstrate how they compromised a system and how the system could have been hardened to secure from compromise. No matter what your skill level, Hack Warz is a great event to test your skills and have a blast!

Hack Warz® is now hosted on Amazon's AWS allowing nationwide participation, rapid deployment, and increased performance. Amazon's virtual private cloud design allows competitors to work remote or on-site and provides each cyber team with their own virtual private cloud, reducing the possibility of collisions with other teams.

Life Cycle Engineering solves customers' business problems with cost-effective Information Technology (IT) solutions, specializing in net-centric and cyber engineering and testing. We provide rapid delivery of IT products through agile development and testing processes that are leading-edge solutions to long-standing problems.
